Getting good map coordinates

Written by Jim Kinter, K5KTF - Last Updated Tuesday, 28 October 2014 23:03

The BEST way I have found to get the exact spot to submit to our map:

Go to Google and log in (you have to, to be able to get to a certain function);

Go to Google Maps in map mode, zoom in to the QTH;

Once you get close, switch to Satellite view and zoom all the way in;

Down in the bottom right is a circle with a ? in it:

Click it and select "Return to Classic Google maps" (I always check the "Missing Features" box);

Getting good map coordinates

Feedback on the new Google Maps?

We're continuing to improve the new Google
Please let us know why you are looking for c

- [ ] Prefer classic Google Maps
- [x] Missing features
- [ ] Other

Lea

Now, right click exactly where you want a node to show, select "Drop LatLng Marker";

Drop LatLng Marker

When you do, you will get this:

30.518734, -97.878840 ✖

You can highlight the text in that marker with a mouse:

30.518734, -97.878840 ✖
